

About Me

Senior Frontend Developer with around 4 years of experience in the web development lifecycle. Expert in building high-performance, scalable applications using React, Next.js, and TypeScript.

Specialized in architecting maintainable codebases through Feature-Based Architecture and managing complex state logic. Proven track record of delivering enterprise-level solutions, from insurance dashboards to real-time chat platforms, with a focus on clean code and pixel-perfect UI/UX.

PERSONAL DETAIL

- Nationality - Myanmar
- Date of Birth - 2/3/2002
- Gender - Male

HTET MYAT AUNG

Senior Frontend Developer

EXPERIENCES

IT CORNER

Mandalay - Myanmar

2022 - 2023

During my tenure at the IT CORNER, I focused on both training and frontend web design for a span of one years. This involved developing training programs and designing user-friendly interfaces. I got a lot of experience at this work.

Freelance

Yangon - Myanmar

2023

During my one-year freelance journey, I engaged in collaborative efforts, effectively contributing to team projects while demonstrating strong teamwork skills. I actively collaborated with team members, effectively managing time to meet project deadlines and deliver quality results.

Innovix Solutions

Yangon - Myanmar

2023 - 2026

During my tenure at Innovix Solutions company, I spearheaded the development of numerous dynamic and static websites, including government static sites, e-commerce platforms, chat web versions, online library websites, and more. These projects presented various challenges that I adeptly navigated, honing my problem-solving skills and enriching my experience.

- Spearheaded the architecture and development of high-traffic dynamic websites, including government portals, e-commerce platforms, and real-time chat applications.
- Resolved complex technical challenges during the development of online libraries and insurance dashboards, improving application stability and performance.
- Bridged the gap between design and implementation by utilizing Figma and Adobe XD to create pixel-perfect , user-friendly interfaces.

EDUCATION

Yadanabon University

Geography Major
2019

MST University

ITPEC (Information Technology)
2022

LANGUAGES

- English (Intermediate)
- Burmese (native)

TECHNICAL SKILLS

- HTML , CSS
- SASS
- JavaScript, TypeScript
- Bootstrap & Tailwind css
- React Js & Next Js
(others ecosystem)
- Figma, Adobe XD
(design tools)
- Git & GitHub (VCS)
- Apis Integration
- Node js , Prisma ,
Postgresql

CERTIFICATES

- Essential Digital Skills
(NVL University)
- Web Development
(NVL University)
- Special Web Design (MMSIT)

INTERPERSONAL SKILLS

- Communication
- Active Listening
- Collaboration
- Conflict Resolution
- Emotional Intelligence
- Good at analytical skill, eager

EXPERTISES

- Management Skills
- Creativity
- Responsive Design
- Clean Code
- User Friendly UI
- Design Maintenance

PROJECTS LISTS

- Pet Food Shop Ecommerce
- Online Library Web App
- Community Chat Web Application
- Ecommerce
- Fake Commerce
- School Website
- Marketing Brand Website
- Core Insurance System
- Bank Website
- Foodie Website

Core Insurance System

- **Architecture & Scalability** : Architected the project using a **Feature-Based** Folder Structure, decoupling domain-specific logic (e.g., Policies, Claims, User Management) to ensure the codebase remains maintainable as the team and feature set expand.
- **Tech Stack** : React + Vite, Redux Toolkit, RTK Query, Tailwind CSS, React Hook Form and other ecosystem
- **State Management** : Leveraged Redux Toolkit and RTK Query for advanced server-state caching, reducing global state complexity and streamlining data flow across the application.
- **Form Management** : Engineered complex, multi-step insurance application forms using React Hook Form, optimizing performance by minimizing unnecessary re-renders in deeply nested UIs.
- **Development Workflow** : Modernized the build pipeline using Vite, resulting in significantly faster hot-module replacement (HMR) and a more efficient developer experience.
- **Access Control (RBAC)** : A robust Role-Based Access Control system to manage various user tiers (Admin, Agent, Team, Customer). This involved:
 - Implementing Higher-Order Components (HOCs) and Conditional Routing to restrict sensitive pages and UI elements based on user permissions.
 - Integrating RBAC checks within RTK Query headers to ensure secure data fetching.
- **The Challenge** : Handling multi-step insurance applications and complex form validation while managing a massive global state for the dashboard.
